## TRIDONIC

## $\square \square \square$

## EM powerLED BASIC FX C 50 W

Combined emergency lighting LED Driver

## Product description

- Fixed output LED Driver for mains operation with integrated Simple CORRIDOR FUNCTION (CF)
- Emergency lighting LED Driver with manual test function
- For self-contained emergency lighting
- For LED modules with a forward voltage of $15-50 \mathrm{~V}$
- SELV for output voltage < 60 V DC
- For luminaire installation
- Compact plastic casing ( $183 \times 82 \times 34 \mathrm{~mm}$ )
- 5 years guarantee

## Properties

- 4.9 - 50 W output power
- Constant current LED operation
- 300-1,400 mA output current in mains operation selectable with I-SELECT PLUG in steps of 50 mA
- Simple CORRIDOR FUNCTION (CF) with $10 \%$ light level
- Integrated emergency lighting unit
- 1 or 3 h rated duration selectable with plug (duration link)
- Automatic shutdown of output if LED load is out of range
- Green charge status display LED
- Electronic charge system
- Polarity reversal protection for battery
- Deep discharge protection
- Short-circuit-proof battery connection

## Batteries

- High-temperature cells
- NiCd or NiMH batteries
- D, Cs, LA or LAL cells
- Battery box for independent use
- 4 -year design life
- 1-year guarantee
- For battery compatibility refer to table „Battery selection"

Combined emergency lighting LED Driver

Technical data

| Rated supply voltage | 220-240 V |
| :---: | :---: |
| Mains frequency | $50 / 60 \mathrm{~Hz}$ |
| Typ. $\lambda$ (at $230 \mathrm{~V}, 50 \mathrm{~Hz}$, normal operation) | 0.95 |
| Typ. $\lambda$ (at $230 \mathrm{~V}, 50 \mathrm{~Hz}, \mathrm{CF}$ operation) | 0.45 |
| Overvoltage protection | 320 V (for 1 h ) |
| Battery charging time | 24 h |
| Max. open circuit voltage | 60 V |
| Time to light | < 0.5 s from detection of emergency event |
| Typ. power consumption in charging | 3.5 W |
| Output LF current ripple ( $<120 \mathrm{~Hz}$ ) | <2\% |
| Output current tolerance | $7 \%$ |
| THD normal operation | < 20 \% |
| THD CF operation | < 30 \% |
| Ambient temperature ta $>45 \mathrm{~W}$ | $50^{\circ} \mathrm{C}$ |
| Ambient temperature ta $\leq 45 \mathrm{~W}$ | $55^{\circ} \mathrm{C}$ |
| Max. casing temperature tc | $85^{\circ} \mathrm{C}$ |
| Dimensions LxBxH | $183 \times 82 \times 34 \mathrm{~mm}$ |
| Mains voltage changeover threshold | according to EN 60598-2-22 |
| Type of protection | IP20 |
| Charge current 1 h | 100 mA |
| Charge current 3h | 200 mA |
| Discharge current 1 h | 960 mA |
| Discharge current 3h | 960 mA |
| Lifetime | up to 50,000 h |
| Guarantee | 5 years |

Duration link 3 h No duration link 1 h

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link and I-SELECT PLUG must be set before battery and mains connection.

| LED EM green, ultra high brightness | $\mathbf{8 9 8 9 9 7 5 6}$ | $25 \mathrm{pc}(\mathrm{s})$. | $200 \mathrm{pc}(\mathrm{s})$. | 0.012 kg |

## Product description

- Motion detector for luminaire installation
- Motion detection through glass and thin materials (except metal)
- For automatic on/off switching of electronic ballasts
- Bright-out function: luminaire is not switched on if there is adequate brightness
- Delay time, detection range and light value for the bright-out function can be set via 9 dip switches
- Max. installation height 5 m
- Two housing options allowing flexible installation
- Variable detection area (100-10 \%)
- Zero cross switching supported
- 5 years guarantee

## 它 쓸 NiCd Battery pack 1.8-4.5 Ah <br> Batteries

## Product description

- High-temperature NiCd battery pack for use with emergency lighting units

## Properties

- Constant high-temperature operation - depending on the emergency lighting unit used (refer to respective emergency control gear datasheet)
- Good charging properties at high temperature
- High energy maintenance of the charged battery
- 4 year lifetime in operation at max. temperature
- Certified quality manufacturer
- Casing material made of polycarbonate
- 0.2 m double-insulated cable with plug connection
- 0.8 m double-insulated cable with plug and pre-stripped ends for connection with the emergency unit
- $1.0 \mathrm{~mm}^{2}$ solid wire, pre-stripped
- Suitable for emergency lighting equipment as per IEC 60598-2-22

## Product description

- High-temperature NiMH battery pack for use with emergency lighting units
- 4-year design life
- 1-year guarantee

## Properties

- Constant high-temperature operation
- Temperature depending on the used emergency lighting unit (refer to respective emergency control gear datasheet)
- Good charging properties at high temperature
- High energy maintenance of the charged battery
- Certified quality manufacturer
- Casing material made of polycarbonate
- $1.0 \mathrm{~mm}^{2}$ stranded wire
- Suitable for emergency lighting equipment as per IEC 60598-222

## 1. Standards

- EN 55015
- EN 61000-3-2
- EN 61000-3-3
- EN 61347-2-13
- EN 61547
- EN 62384
- EN 61347-2-7
- according to EN 50172
- according to EN 60598-2-22

### 1.1 Glow-wire test

according to EN $60598-1$ with increased temperature of $850^{\circ} \mathrm{C}$ passed.

### 1.2 Temperature range

The LED Driver life duration is related to the ambient temperature ta. The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max. or higher, ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

### 1.3 Insulation and electric strength testing of luminaires

Electronic LED Driver can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 Voc for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least $2 \mathrm{M} \Omega$.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with $1,500 \mathrm{VAC}$ (or $1,414 \times 1,500 \mathrm{VDC}$ ). To avoid damage to the electronic devices this test must not be conducted.

## 2. Thermal data

### 2.1 Expected Lifetime

Average lifetime 50,000 hours under rated conditions with a failure rate of less than $10 \%$. Average failure rate of $0.2 \%$ per 1000 operating hours.

Expected lifetime

| Type | Output power | ta | $40^{\circ} \mathrm{C}$ | $50^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| EM po | 10 W | tc | $56^{\circ} \mathrm{C}$ | $66^{\circ} \mathrm{C}$ | $71^{\circ} \mathrm{C}$ |
|  |  | lifetime | > 100,000 h | > 100,000 h | > 100,000 h |
|  | 20 W | tc | $59{ }^{\circ} \mathrm{C}$ | $69^{\circ} \mathrm{C}$ | $74{ }^{\circ} \mathrm{C}$ |
|  |  | lifetime | > 100,000 h | > 100,000 h | > 100,000 h |
|  | 30 W | tc | $63^{\circ} \mathrm{C}$ | $73^{\circ} \mathrm{C}$ | $78^{\circ} \mathrm{C}$ |
|  |  | lifetime | > 100,000 h | $>100,000 \mathrm{~h}$ | > 100,000 h |
|  | 40 W | †c | $69^{\circ} \mathrm{C}$ | $79^{\circ} \mathrm{C}$ | $79^{\circ} \mathrm{C}$ |
|  |  | lifetime | > 100,000 h | $>90,000 \mathrm{~h}$ | $>90,000 \mathrm{~h}$ |
|  | 45W | tc | $70^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $85^{\circ} \mathrm{C}$ |
|  |  | lifetime | > 100,000 h | >90,000 h | > 50,000 h |
|  | 50 W | tc | $76^{\circ} \mathrm{C}$ | $85^{\circ} \mathrm{C}$ | $\times$ |
|  |  | lifetime | > 95,000 h | >50,000 h | x |

[^1]The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

## 3. Installation / Wiring

### 3.1 Wiring diagrams

## Wiring diagram EM powerLED BASIC FX without sensor

When using the EM powerLED without a sensor, connect the terminals C / F and
L link with a wire.

The connected LED module will be used for mains and emergency operation.

Switching behaviour

| $\mathbf{S / L}$ | C/F | LED |
| :---: | :---: | :---: |
| off | off | off |
| off | on | off |
| on | off | $10 \%$ |
| on | on | $100 \%$ |

The mains power must be removed before changing the LED load.
Secondary switching of LEDs is not allowed and may cause damage to the LEDs. The hot plug-in of LEDs during normal operation may result in high current peaks.

## Note

The EM powerLED BASIC FX 50W uses pulse width modulation (PWM) for the LED operation in CORRIDOR mode. This can have an adverse effect on video recording equipment e.g. cctv.
Caution should be observed when using the CORRIDOR FUNCTION in cctv monitored areas.

Wiring diagram EM powerLED BASIC FX with sensor

### 3.2 Wiring type and cross-section

## Wiring

Mains (N, L, C/F, L link, S/L)
$0.5-1.5 \mathrm{~mm} 2$ solid or fine-stranded
$0.5-1.0 \mathrm{~mm} 2$ fine-stranded with ferrule
LED (LED + LED -)
Batteries (Bat +, Bat -)
I set

## Wiring

Test switch
Indication LED
$0.2-0.5 \mathrm{~mm}^{2}$ solid or fine-stranded $0.25 \mathrm{~mm}^{2}$ fine-stranded with ferrule

Use one wire for each terminal connector only. Use each strain relief channel for one cable only.

$\max .=10 \mathrm{~mm}$
$\mathrm{min} .=6,3 \mathrm{~mm}$

Max. lead insulation diameter

| Battery | 2.1 mm |
| :--- | :--- |
| Test switch | 2.1 mm |
| Indicator LED | 2.1 mm |

## Maximum lead length

 LEDstatus indication LED batteries

### 3.3 Release of the wiring

Press down the "push button" and remove the cable from front.

## Installation instruction

Max. torque for the mounting screws: $0.5 \mathrm{Nm} / \mathrm{M} 4$.

### 3.4 Fixing conditions

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.

### 3.5 Wiring guidelines

- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- LED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m . For a good EMC performance keep the LED wiring as short as possible.
- The secondary wires (LED module) should be routed in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m . The test switch and Indicator LED wiring should be separated from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m .
- To avoid the damage of the control gear, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire the switched and unswitched 50 Hz supply wiring must be routed as short as possible and be kept as far away as possible from the LED leads.Through wiring may affect the emc performance of the luminaire.

The length of LED leads must not be exceeded.

The output current depends on the forward voltage and the tolerance of the LED modules.

## 4. Mechanical data

### 4.1 Housing properties

- Polycarbonat white
- Type of protection IP 20

### 4.2 Mechanichal data accessories

LED status indicator

- Green
- Mounting hole 6.5 mm diameter, 1 - 1.6 mm thickness
- Lead length $0.3 \mathrm{~m} / 1.0 \mathrm{~m}$
- Insulation rating: $90^{\circ} \mathrm{C}$

Test switch

- Mounting hole 7.0 mm diameter
- Lead length 0.55 m

Battery leads

- Quantity: 1 red and 1 black
- Length: 1.3 m
- Wire type: $0.5 \mathrm{~mm}^{2}$ solid conductor
- Insulation rating: $90^{\circ} \mathrm{C}$

Battery end termination
Push on 4.8 mm receptacle to suit battery spade fitted with insulating cover

Module end termination
8.0 mm stripped insulation

Two-piece batteries are supplied with a 200 mm lead with 4.8 mm receptacle at each end and insulting covers to connect the separate sticks together.

## 5. Electrical data

5.1 Maximum loading of automatic circuit breakers

### 5.4 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM powerLED module based on the total forward voltage of the LED modules connected and the associated battery.

EM powerLED BASIC FX 103 C 50W 50V - 3 cells
Article number: 89800429
3.6 V battery voltage,

750-960 mA battery discharge current

EM powerLED BASIC FX 104 C 50W 50V - 4 cells
Article number: 89800411
4.8 V battery voltage,
$750-960 \mathrm{~mA}$ battery discharge current

LED current at nominal battery voltage and min. battery discharge current

LED current at nominal battery voltage and max. battery discharge current

LED peak current at start in emergency mode - 3 cells

| Voltage | Inrush current | Duration |
| :--- | :--- | :--- |
| 46.0 V | 209 mA | 7.35 ms |
| 43.5 V | 218 mA | 7.85 ms |
| 41.0 V | 229 mA | 8.10 ms |
| 38.5 V | 241 mA | 8.25 ms |
| 36.0 V | 255 mA | 8.35 ms |
| 33.5 V | 270 mA | 8.55 ms |
| 31.0 V | 288 mA | 8.85 ms |
| 28.5 V | 307 mA | 9.10 ms |
| 26.0 V | 330 mA | 9.40 ms |
| 23.0 V | 354 mA | 9.80 ms |
| 20.5 V | 383 mA | 10.45 ms |
| 18.0 V | 417 mA | 11.40 ms |
| 15.5 V | 455 mA | 11.95 ms |
| 13.0 V | 500 mA | 15.10 ms |
|  |  |  |

Note: LED peak current is measured at the max. battery discharge current.

### 5.5 Output current setting

Output current can be set by connecting a resistor between the 2 "I set" terminals. Relationship between output current and resistor value can be found at the table "Specific technical data". Resistor values specified from standardised resistor value ranges.
Resistor value tolerance has to be $\leq 1 \%$.
Resistor power has to be $\geq 0.1 \mathrm{~W}$.
Resistor detection at each start.
Change of the resistor value during the operation will be not considered.
Resistors for the main output current values can be ordered from Tridonic (see accessories).

LED peak current at start in emergency mode - 4 cells

| Voltage | Inrush current | Duration |
| :--- | :--- | :--- |
| 46.5 V | 252 mA | 8.65 ms |
| 44.0 V | 259 mA | 9.30 ms |
| 41.5 V | 268 mA | 8.10 ms |
| 39.0 V | 288 mA | 8.45 ms |
| 36.5 V | 300 mA | 9.45 ms |
| 34.0 V | 323 mA | 9.60 ms |
| 31.5 V | 340 mA | 9.95 ms |
| 29.0 V | 364 mA | 10.85 ms |
| 26.0 V | 388 mA | 11.60 ms |
| 23.5 V | 414 mA | 12.40 ms |
| 21.0 V | 446 mA | 13.35 ms |
| 18.5 V | 479 mA | 15.20 ms |
| 16.0 V | 520 mA | 16.90 ms |
| 13.5 V | 564 mA | 18.95 ms |

## 6. Functions

### 6.1 Short-circuit behaviour

In case of a short circuit the unit switches to shut down mode. After elimination of the short circuit a mains reset (SL off/on) is necessary.

### 6.2 No-load operation or load loss during operation

LED Driver will detect a load loss during operation. In this case and no-load operation the max. output voltage can apply at the LED output for max. 5 s before LED Driver shuts down. Mains reset is required to restart the LED Driver.

### 6.3 Overload protection

LED Driver will switch off at overload operation. Mains reset is required to restart the LED Driver.

### 6.4 Underload operation

LED Driver will switch off at underload operation. Mains reset is required to restart the LED Driver.
6.5 Forward voltage out of range

If the forward voltage is out of range the unit switches to shut down mode. After elimination of the short circuit a mains reset (SL off/on) is necessary.

### 6.6 Duration link selection

| Duration | Usage duration link |
| :---: | :---: |
| $\mathbf{3 ~ h}$ |  |
| $\mathbf{1 h}$ |  |

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link and I-SELECT PLUG must be set before battery and mains connection.
