

Module LLE FLEX G1 8mm SNC

Modules LLE FLEX essence

Product description

- Dimmable 24 V constant voltage LED flextape (SELV)
- Ideal for various decorative lighting applications: facade accent lighting, ceiling integration, cove lighting and for aluminium extrusions
- Long life-time: 50,000 hours
- 5-year guarantee

Optical properties

- Colour temperature 2,700, 3,000, 4,000 and 6,500 K with SDCM 5[®]
- Luminous flux range of 600, 1,200 and 1,800 lm/m
- Efficacy of the module up to 125 lm/W at $t_p = 65^\circ\text{C}$
- Pitch distance of 8.3 mm enables high light homogeneity

Mechanical properties

- High design freedom due to 5 cm cut-options
- Self-adhesive 3M tape at the backside for simple mounting on different surfaces
- PCB to PCB and wire to PCB connectors for toolless handling and connection

System solution

- System solution in combination with Tridonic constant voltage LED Driver (fixed output and dimmable)

Connector for LLE FLEX

Product description

- For connection of LLE FLEX modules
- Easy assembly: remove adhesive 3M tape on the backside of the LLE FLEX in the connection area, insert the LLE FLEX into the connector and lock it by pressing down the top of the connector
- The insertion length of the LLE FLEX must be at least 4 mm (cut the LLE FLEX at the dotted lines)
- Glow wire test according to IEC 60695-2-11: 650 °C
- Irated = 5 A
- Urated = 299 V
- Wire cross section AWG 20

2. Thermal details

2.1 tc point, ambient temperature and life-time

The temperature at tp reference point is crucial for the light output and life-time of a LED product.

For LLE a tp temperature of 65 °C has to be complied in order to achieve an optimum between heat sink requirements, light output and life-time.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

2.2 Storage and humidity

Storage temperature	-35 ... +80 °C
---------------------	----------------

Operation only in non condensing environment.

Humidity during processing of the module should be between 30 to 70 %.

2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the LLE will be greatly reduced or the LLE may be destroyed.

2.4 Heat sink values

LLE FLEX G1 600lm/m

ta	tp	R _{th, hs-a} ^①	Cooling area ^①
25 °C	65 °C		self-cooling
35 °C	65 °C		self-cooling
45 °C	65 °C		self-cooling

LLE FLEX G1 1200lm/m

ta	tp	R _{th, hs-a} ^①	Cooling area ^①
25 °C	65 °C		self-cooling
35 °C	65 °C		self-cooling
45 °C	65 °C	24.5 K/W	27.2 cm²

LLE FLEX G1 1800lm/m

ta	tp	R _{th, hs-a} ^①	Cooling area ^①
25 °C	65 °C	32.0 K/W	20.8 cm²
35 °C	65 °C	24.0 K/W	27.8 cm²
45 °C	65 °C	16.0 K/W	41.8 cm²

^① Values for a single segment of the LLE FLEX (50 mm).

Notes

The actual cooling surface can differ because of the material, the structural shape, outside influences and the installation situation.

3. Installation / wiring

3.1 Electrical supply/choice of LED Driver

LLE modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED Driver which complies with the relevant standards. The use of LED Driver from Tridonic in combination with LLE modules guarantees the necessary protection for safe and reliable operation.

If a LED Driver other than Tridonic is used, it must provide the following protection:

- SELV
- Short-circuit protection
- Overload protection
- Overtemperature protection

LLE must be supplied by a constant voltage LED Driver. Operation with a constant current LED Driver will lead to an irreversible damage of the module.

Wrong polarity can damage the LLE FLEX.

3.2 Mounting instruction

None of the components of the LLE (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

The LLE FLEX is separable each 50 mm with the full function of each segment.

Insulation must be ensured at the contact area of the segments (e.g. by using the connector ACL).

The fixing/cooling surface must be cleaned before installing the LLE FLEX modules to remove all dirt, dust and grease.

Prevent shear- or peel forces

Min. bending radius of the LLE FLEX is 3 cm.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

3.3 Soldering guidelines

The modules are suitable only for manual soldering (max. 260 °C, 2 seconds).

3.4 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

4. Life-time

4.1 Life-time, lumen maintenance and failure rate

The light output of an LED module decreases over the life-time, this is characterized with the L value.

L70 means that the LED module will give 70 % of its initial luminous flux.

This value is always related to the number of operation hours and therefore defines the life-time of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules.

The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value. In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

4.2 Lumen maintenance for LLE FLEX 8mm

Supply voltage	tp temperature	L90 / F10	L90 / F50	L80 / F10	L80 / F50	L70 / F10	L70 / F50
24 V	45 °C	25,000 h	28,000 h	46,000 h	53,000 h	>60,000 h	>60,000 h
24 V	55 °C	24,000 h	28,000 h	45,000 h	53,000 h	>60,000 h	>60,000 h
24 V	65 °C	23,000 h	27,500 h	43,000 h	52,500 h	>60,000 h	>60,000 h
24 V	75 °C	22,000 h	27,000 h	41,000 h	52,000 h	>60,000 h	>60,000 h

6. Photometric characteristics

6.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured integral by a current impulse with typical values of module and a duration of 100 ms.

The ambient temperature of the measurement is $t_a = 25^\circ\text{C}$.

The measurement tolerance of the colour coordinates are ± 0.01 .

— MacAdam Ellipse: 5SDCM

**6.2 Light distribution**

The optical design of the LLE product line ensures optimum homogeneity for the light distribution.

The colour temperature is measured over the complete module. The single LED light points are inside of 5SDCM. To ensure an ideal mixture of colours and a homogeneous light distribution a suitable optic (e. g. PMMA diffuser) and a sufficient spacing between module and optic (typ. 1 cm) should be used.

6.3 Relative luminous flux vs. tc temperature

6.4 Relative luminous flux vs. LED tape length
